

PHYS 5BL–Spring 2026 — Pre-Lab 1 Response

Vijay Hans, SID 3041285081

January 26, 2026

1. Done!
2. Essentially, the planes which returned to England were those that suffered damage to non-critical areas; all those which received damage to other areas didn't come home. Thus, the areas which showed damage are noncritical, and the areas left undamaged on the returning planes should be reinforced.
3. (a) is more probable, as for (b) to be true (a) must also be true. Thus there is no scenario where (b) occurs and (a) does not while there is a scenario where (a) occurs and (b) does not (that is, (b) occurs only if (a) does), so (b) is necessarily less likely than (a).
